Formerly:	SOSC 2

Description

This course offers an introduction to the origins, current dilemmas, and future trends of major issues confronting the global community such as energy and resource depletion, food and population, war and terrorism, nuclear arms, human rights, economic interdependence, and international inequality. The role of global institutions and global citizenship will be considered as they relate to global issues.

Course Objectives

The student will be able to:

- Identify major recurring and emerging global issues
- Examine and analyze one or more specific global problems of international or regional nature, and discuss approaches to its/their solution (from an international perspective)
- Analyze the interconnections between and among global issues
- Compare and evaluate the efficacy of national, regional, and international efforts to solve the problems associated with global issues

Course Content
