R T 63: ADVANCED RADIOGRAPHIC PRINCIPLES

Foothill College Course Outline of Record

Heading	Value
Effective Term:	Summer 2021
Units:	3
Hours:	3 lecture per week (36 total per quarter)
Prerequisite:	R T 62B.
Degree & Credit Status:	Degree-Applicable Credit Course
Foothill GE:	Non-GE
Transferable:	CSU
Grade Type:	Letter Grade Only
Repeatability:	Not Repeatable

Student Learning Outcomes

- The student will pass a 25-point test on patient care with a score of 75% or higher.
- The student will pass a 15-point quiz on imaging procedures with a score of 75% or higher.

Description

Special emphasis on reviewing the content specifications for the ARRT Examination in Radiography; radiation protection, equipment operation and quality control, image acquisition and evaluation, imaging procedures, patient care and education. Intended for students in the Radiologic Technology Program; enrollment is limited to students accepted in the program.

Course Objectives

The student will be able to:

- A. Define terminology related to the electromagnetic spectrum.
- B. Discuss human exposure to types of background radiation.
- C. Identify dose-response curves and discuss the application of each.
- D. Identify NCRP recommendations for reducing patient exposure.
- E. Explain how the cardinal principles of radiation protection are used to decrease occupational exposure.
- F. Describe primary and secondary barriers.
- G. Describe the operation of each type of personal dosimeter.
- H. Identify the occupational dose limits and discuss their similarities and differences to patient protection.
- I. Explain the function and operation of transformers.
- J. Describe the fundamentals of anatomically programmed radiography (APR).
- K. Identify the structure and function of the x-ray tube.
- L. Describe and compare CR and DR.
- M. Explain the use of exposure indication systems.
- N. Describe care and maintenance of IPs and PSPs.
- O. Describe care and maintenance of protective apparel.
- P. Compare the fundamental imaging of digital versus screen-film
- Q. Identify and discuss the factors unique to digital imaging that influence image visibility.
- R. Identify various digital artifacts.
- S. Explain the function of histograms and LUTS.

- T. Critique images for resolution, distortion, brightness and gray scale.
- U. Explain the concepts and steps involved in performing an accurate and efficient imaging procedure.
- V. Identify human anatomy as displayed on illustrations and x-ray images.
- W. Explain accurate positioning details for routine imaging of the body parts.
- X. Assess and critique x-ray images for positioning accuracy and quality.
- Y. Discuss ways in which routine imaging can be modified for trauma, mobile imaging and other nonroutine circumstances.
- Z. Identify the purpose of an Advanced Care Directive and its impact on patient autonomy and decision-making.
- AA. Discuss the value of objective and subjective patient information.
- BB. Explain the cycle involved in transmitting infectious disease.
- CC. Identify the types of contrast media and cite examples of their usage.

Course Content

- A. Review radiation protection
- 1. Biologic aspects of radiation
- a. Radiosensitivity
- b. Somatic effects
- c. Acute radiation syndrome
- d. Embryonic and fetal risks
- e. Genetic impact
- f. Photon interactions with matter
- 2. Minimizing patient exposure
- a. Exposure factors
- b. Shielding
- c. Beam restriction
- d. Filtration
- e. Exposure reduction
- f. Image receptors
- g. Grids
- h. Fluoroscopy
- 3. Personnel protection
- a. Sources of radiation exposure
- b. Basic methods of protection
- c. Protective devices
- d. Special considerations
- 4. Radiation exposure and monitoring
- a. Units of measurement
- b. Dosimeters
- c. NCRP recommendations for personnel monitoring
- d. Medical exposure of patients
- B. Review equipment operation and quality control
- 1. Principles of radiation physics
- a. X-ray production
- b. Target interactions
- c. X-ray beam
- 2. Imaging equipment
- a. Components of radiographic unit
- b. X-ray generator, transformers, and rectification system
- c. Components of fluoroscopic unit
- d. Components of digital imaging (CR and DR)
- e. Types of units
- f. Accessories
- 3. Quality control of imaging equipment and accessories
- a. Beam restriction
- b. Recognition and reporting of malfunctions
- c. Digital imaging receptors systems

- d. Shielding accessories
- C. Review image acquisition and evaluation
- 1. Selection of technical factors
- a. Factors affecting radiographic quality
- b. Technique charts
- c. Automatic exposure control
- d. Digital imaging characteristics
- 2. Imaging processing and quality control
- a. Image identification
- b. Film screen processing
- c. Digital imaging processing
- d. Image display
- e. Digital image display informatics
- 3. Criteria for image evaluation
- a. Brightness/density
- b. Contrast/gray scale
- c. Recorded detail
- d. Distortion
- e. Demonstration of anatomical structures
- f. Identification markers
- g. Patient considerations
- h. Image artifacts
- i. Fog
- j. Noise
- k. Acceptable range of exposure
- I. Exposure indicator determination
- m. Gross exposure error
- D. Review imaging procedures
- 1. Thorax
- 2. Abdomen and GI studies
- 3. Urological studies
- 4. Spine and pelvis
- 5. Head
- 6. Extremities
- E. Review patient care and education
- 1. Ethical and legal aspects
- a. Patient's rights
- b. Legal issues
- c. ARRT Standards and ethics
- 2. Interpersonal communication
- a. Modes of communication
- b. Challenges in communication
- c. Patient education
- 3. Infection control
- a. Terminology and basic concepts
- b. Cycle of infection
- c. Standard precautions
- d. Additional or transmission-based precautions
- e. Disposal of contaminated materials
- 4. Physical assistance and transfer
- a. Patient transfer and movement
- b. Assisting patients with medical equipment
- c. Routine monitoring
- 5. Medical emergencies
- a. Allergic reactions
- b. Cardiac or respiratory arrest
- c. Physical injury or trauma
- d. Other medical disorders
- 6. Pharmacology
- a. Patient history
- b. Complications/reactions
- 7. Contrast media

- a. Types and properties
- b. Appropriateness of contrast media to exam
- c. Patient education
- d. Venipuncture
- e. Administration

Lab Content

Not applicable.

Special Facilities and/or Equipment

- A. Multimedia classroom
- B. Internet access
- C. Classroom with viewboxes
- D. Subscription to the online RadReview ARRT Exam Preparation

Method(s) of Evaluation

Methods of Evaluation may include but are not limited to the following:

Quizzes

Midterm

Simulated registry examinations

Final examination

Method(s) of Instruction

Methods of Instruction may include but are not limited to the following:

Lecture

Discussions

Online testing

Representative Text(s) and Other Materials

Types and/or Examples of Required Reading, Writing, and Outside of Class Assignments

A. Students are assigned weekly reading assignments from the textbook, Radiography PREP Program Review & Exam Preparation.

B. To test their knowledge and retention of the read material, students take weekly exams online where they are required to obtain a certain percentage correct.

Discipline(s)

Radiological Technology
