Student Learning Outcomes

- State the structure of the upper and lower airways.
- Describe the alveolar capillary membrane and gas diffusion.

Description

Anatomy of the respiratory system, ventilation, diffusion of pulmonary gases, circulatory system, and oxygen transport. Intended for students in the Respiratory Therapy Program; enrollment is limited to students accepted in the program.

Course Objectives

The student will be able to:

a. State the structure of the upper airways.
b. State the structure of the lower airways.
c. Name and locate the bronchopulmonary segments.
d. Describe the mucus blanket.
e. Relate the action of the respiratory muscles to rib, thoracic movement and pleural pressures.
f. Describe the alveolar capillary membrane and gas diffusion.
g. Graph lung volumes and capacities.
h. Diagram the pulmonary, systemic, and bronchial circulation.
i. Locate and name the large arteries and veins in the adult.

Course Content

a. Upper airways
   i. Oropharynx
   ii. Nasopharynx
   iii. Larynx
b. Lower airways
   i. Trachea
   ii. Mainstem bronchi
   iii. Segmental bronchi
   iv. Terminal bronchioles
   v. Respiratory bronchioles
   vi. Acini and alveoli
c. Bronchopulmonary segments
   i. Right lung segments
   ii. Left lung segments
d. Mucus blanket
   i. Sol layer
   ii. Gel layer
   iii. Epithelium
   iv. Goblet cells and mucus glands
e. Action of the respiratory muscles in relation to rib, thoracic movement and pleural pressures
   i. During inspiration
   ii. During expiration
   iii. At rest
f. Alveolar capillary membrane and gas diffusion
   i. Type 1 cells
   ii. Type 2 cells
g. Lung volumes and capacities
   i. Four volumes
   ii. Four capacities
h. Pulmonary, systemic, and bronchial circulation
   i. Pulmonary
   ii. Systemic
   iii. Bronchial
i. Large arteries and veins
   i. Arteries
   ii. Veins

Lab Content

Not applicable.

Special Facilities and/or Equipment

1. When taught on campus: classroom with computer and internet access, document camera and DVD/CD player. For online work, must have access to a computer with internet.
2. When taught via Foothill Global Access: must have access to a computer with internet.

Method(s) of Evaluation

Methods of Evaluation may include but are not limited to the following:

- Written quizzes
- Midterm
- Final examination

Method(s) of Instruction

Methods of Instruction may include but are not limited to the following:

- Lecture
Representative Text(s) and Other Materials

While the Beachey text is over five years old, it still represents the standard in the field.

Types and/or Examples of Required Reading, Writing, and Outside of Class Assignments
Assigned reading from textbook, approximately one chapter/week.

Discipline(s)
Respiratory Technologies
