GEOGRAPHIC INFORMATION SYSTEMS TECHNOLOGY

Program Description

Geospatial technology is the unifying tool with which spatial phenomena is explored. Geospatial technology consists of Geographic Information Systems, Global Positioning Systems, and Remote Sensing. The Geographic Information Systems Technology program at Foothill College provides opportunities for career preparation and lifelong learning by providing courses that meet workforce needs. Geographic information systems are collections of computers, software applications, and personnel used to capture, store, transform, manage, analyze, and display spatial information. The associate degree provides a solid technical background in geographic information systems concepts and applications, including cartographic concepts, database design, programming, and interdisciplinary applications of the technology, and also prepares students to transfer to four-year institutions in Geospatial Science. The outcomes of the associate degree align with the U.S. Department of Labor geospatial competency model for geospatial careers. The degree also includes general education and elective courses required for graduation. The Geographic Information Systems Technology degree prepares students for entry-level technician jobs or to transfer to a four-year institution.

Program Learning Outcomes

- Students will be able to apply cartographic principles of scale, resolution, projection, data management, and spatial analysis to a geographic nature using a geographic information system.
- Students will be able to plan, evaluate, and execute an original geographic information systems project.
- Students will be able to demonstrate the ability to communicate orally, in writing and graphically, the outcome of geographic information systems analysis.
- Students will be able to demonstrate an awareness of professional obligations to society, employers and funders, and individuals as outlined in the Geographic Information Systems Professional Certification Institute Code of Ethics.

Career Opportunities

Geographic information systems skills are highly desirable in agriculture, archaeology, business, cartography, government, law enforcement, marketing, environmental sciences, forestry, real estate, and urban planning.
